LeafOBC-WafflePlate: first-pass schematic of the 2012 Nissan Leaf OBC power module ("waffle plate")

DRAFT. Sections A and D are meter-verified and drawn with wires; the rest uses net labels. Topology is from the community draft schematic plus identified part numbers. Connections are NOT yet verified against the module. Hidden fields per part: Verified, Draft_ref, Location_px (pixel position in images/stitched/waffle-plate-top.jpg).

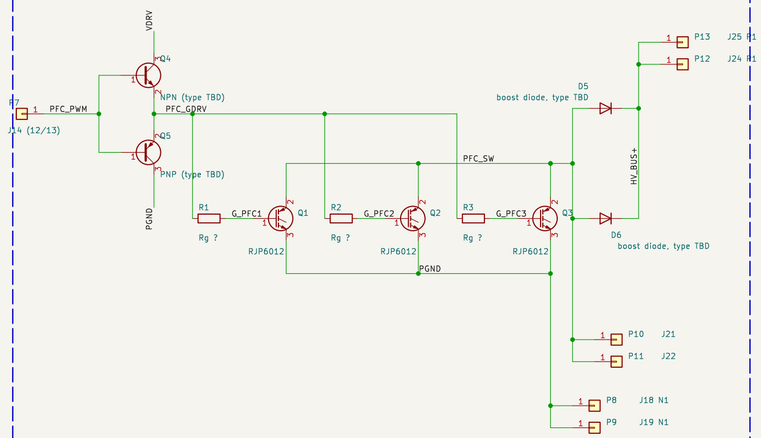

A. Input bridge and shunts (upper left)

RS1 + RS2: one current shunt in two parts.

Kelvin sense taken from the outer terminals (NT1, NT2).

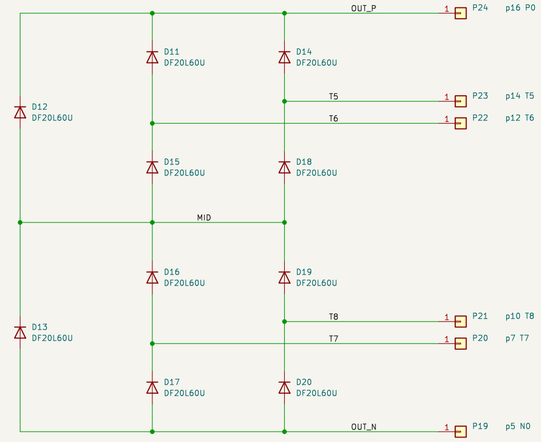

B. PFC boost stage (mid left)

Q1-Q3 in parallel, each with its own gate resistor. D5, D6 in parallel.

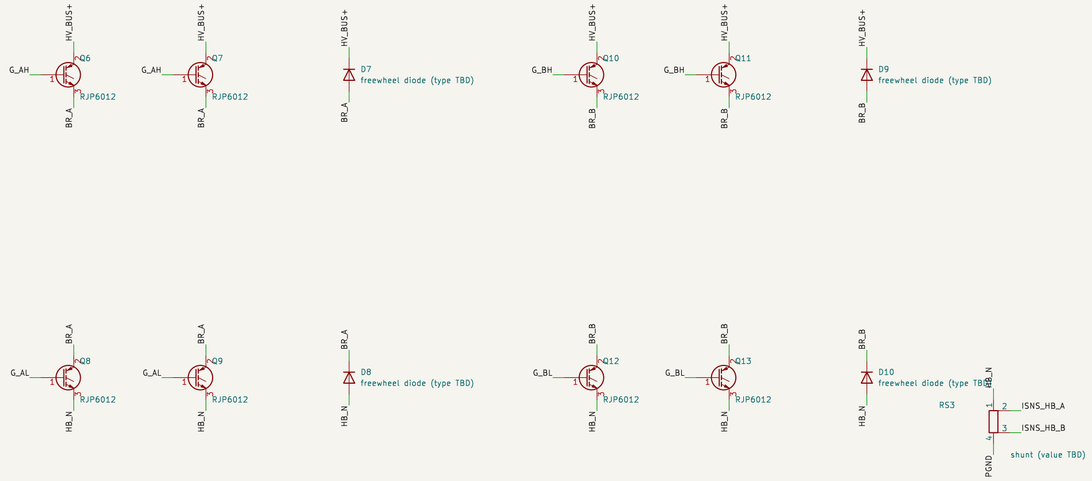

Netlist believed correct, not yet meter-verified.

D. Output rectifier: two series-stacked bridges (upper right)

Verified with meter: D11-D20 and pads.

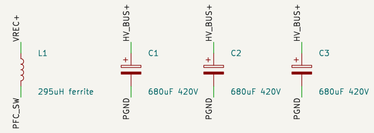

C. Primary full bridge, 2 IGBTs in parallel per switch (lower right)

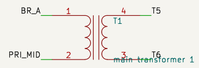

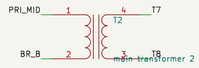

Gate and gate-emitter resistors around the bridge are not yet catalogued.

Which IGBT pair is which switch is a placeholder until traced.

E. Off-module parts (charger PCB)

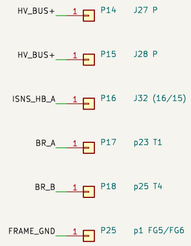

Primaries shown in series: verify.

F. Remaining module pads (draft numbering, unverified)

Pads for A, B and D are drawn next to their circuit.

Unassigned draft pads: J8 (6, IC312_PFC), J12/J13 (11), J15 (10/9), J30/J31 (N-N1), p27, p29, p31, p32, p33

CERN-OHL-S-2.0
Sections A and D meter-verified. Rest unverified.
